Soils Engineering Company providing Recommendations and _____
Verifying Compliance:

Project No: _____ Date: _____ Report By: _____

Project No: _____ Date: _____ Report By: _____

Site Improvement Requirements

Soils/Geotechnical Engineer shall be retained to provide excavation/grading recommendations, **including exterior retaining walls, drainage, and rock slopes**, to verify compliance with zoning standards and IBC Appendix K, and where a four foot (4') or taller retaining wall is built on site, additional site design requirements shall apply prior to issuance of a building permit.

_____ agrees to provide services during foundation/sub grade preparation according to IBC R401.2 requirements and accepted engineering practices. Following completion of the services agreed upon, a foundation compliance report stamped by the professional engineer employed by the responsible firm will be provided stating their professional opinion with regards to whether the work is in compliance with the recommendations contained in the geotechnical report.

YES NO

Were expansive soils found on site?

Were collapsible soils found on site?
